Dr. Kyungjune Cho

Convergence Research Center for Solutions to Electromagnetic Interference in Future-mobility(SEIF), Korea Institute of Science and Technology, Seoul, Republic of Korea

Kyungjune Cho, PhD is a Senior Research Scientist at the Korea Institute of Science and Technology (KIST, Seoul), affiliated with Convergence Research Center for SEIF (Solutions to Electromagnetic Interference in Future-mobility), and an Associate Professor in the Division of Nanoscience and Technology at the Korea National University of Science and Technology (UST). He received his PhD in Physics from Seoul National University and conducted postdoctoral research at the Max Planck Institute of Microstructure Physics (Halle) and KIST. His research spans 2D van der Waals nano device physics, large-area and scalable applications of 2D materials for flexible and transparent electronics, and designer interfaces to tune interfacial interactions and device behavior in low-dimensional systems and integrated platforms.
